The IAHR Ecohydraulics Committee and the local organizing committee organize the 14th International Symposium on Ecohydraulics (ISE 2022) that will be held on October 10-14, 2022 in Nanjing, China. Ecohydraulics is a rapidly developing inter-discipline of ecology and hydraulics brought about by the ever-growing concern of aquatic and riparian ecology. Launched in 1994, the International Symposia on Ecohydraulics aim to provide a platform for scientists and engineers worldwide to discuss cutting-edge scientific progress, compare and evaluate state-of-the-art technical methods, and recommend them to the end-users. The symposium will have six keynote sessions and 40 general sessions under the themes of "Ecohydraulics in Practice" and "Fundamentals of Ecohydraulics". There will be another 10 special sessions.
